

Steps to import the .sql schema file

1. Download SampleSQLFile uploaded on the portal
2. Open mySql Workbench
3. Click on the server option and click **startup/shutdown** option to check server connection. Make sure your server is running

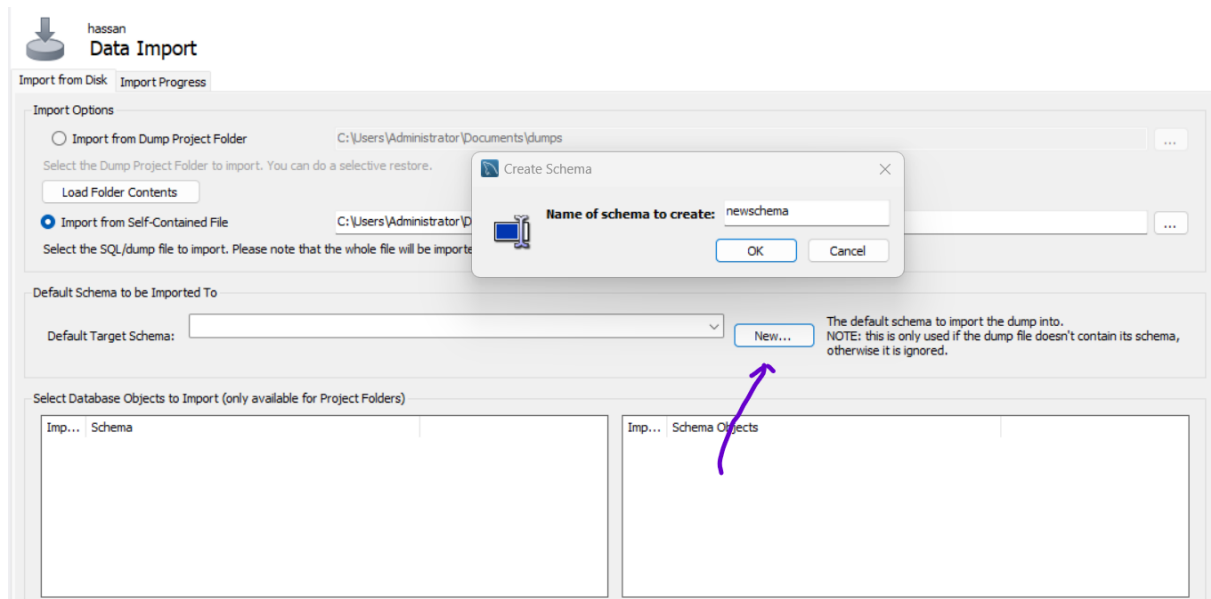

Again, click on server option and select **Data import** option

4. Click on the import from self-contained file and give your path of download folder where you download SampleSQLFile

5. Click on new button and write name of your schema

6. Click on start import

7. New schema will be shown as given images
