```

Select \* from Customers

Select \* from Customers where Country = 'France'

Select \* from Customers where Country = 'France' or Country = 'Germany'

Select \* from Products where price < 22

Select \* from Products where price > 15 and price < 22

Select \* from Products where supplierid <= 10

Select \* from Products where supplierid <= 10 and price > 15 and price < 22

select \* from Products where (price > 15 and price < 22)  
or (supplierid <= 10 and supplierid > 5)

Select \* from Customers where country != 'France'

Select \* from Customers where country <> 'Germany'

Select \* from Orders where orderdate = '1996-07-08'

Select \* from Customers where Country > 'Spain'

Select CustomerName, City, Country from Customers;

Select CustomerName, City, Country from Customers where Country = 'Germany';

Select CustomerName from Customers where country = 'Germany';

Select distinct Country, City from Customers;

Select \* from products where price BETWEEN 10 and 15;

Select \* from products where price NOT BETWEEN 10 AND 15;

Select \* from products where price IN (10, 12, 20, 22, 25, 25.5)

Select \* from products where price NOT IN (10, 12, 20, 22, 25, 25.5)

$$(A \cup B)' = A' \cap B'$$
$$(A \cap B)' = A' \cup B'$$

## Wild Cards

`_` matches exactly 1 character

`%` matches any 0 or more length string

CustomerName starts with L

```
Select * from Customers where ContactName LIKE 'L%';
```

end with n

```
Select * from Customers where ContactName LIKE '%n';
```

2nd name start with L

```
Select * from Customers where ContactName LIKE '% L%';
```

name has an O anywhere

```
Select * from Customers where ContactName LIKE '%o%';
```

2nd last letter is O

```
Select * from Customers where ContactName LIKE '%o_';
```

name has 3 n's

```
Select * from Customers where ContactName LIKE '%nnn%';
```

```
Select * from Customers where ContactName NOT LIKE '%o%';
```

SELECT CustomerId, ContactName as President, City, Country FROM Customers  
where ContactName like 'A%';

Select \* from Customers where ContactName IS NULL;  
IS NOT NULL

SSN

A

Ids of the Employees whose name start with J

-----  
123456789  
987654321  
453453453  
888665555

Select SSN from Employee where fname like 'J%';

B

Ids of the Employees who have a male dependent

ESSN

Select ESSN from Dependent where sex = 'M';

-----  
333445555  
987654321  
123456789

Find Ids of Employees whose name start with J or they  
have a male dependent

**Select SSN from Employee where fname like 'J%'**

**UNION**

**Select ESSN from Dependent where sex = 'M';**

Union Compatibility

1. # of columns in result of both queries must be same
2. Domain/datatype of corresponding pairs of column must be same

**Select SSN from Employee where fname like 'J%'**

**INTERSECT**

**Select ESSN from Dependent where sex = 'M';**

**Select SSN from Employee where fname like 'J%'**

**EXCEPT**

**Select ESSN from Dependent where sex = 'M';**

### Intersection in MYSQL

Select SSN from Employee where fname like 'J%' AND SSN IN(

Select ESSN from Dependent where sex = 'M');

### Except in MySQL

Select SSN from Employee where fname like 'J%' AND SSN NOT IN(

Select ESSN from Dependent where sex = 'M')

## Selection from Multiple Tables

### Cross Product

Find dependents of female employees

$E.fname, E.lname, E.ssn$

Select  $\hookrightarrow$  ,  $D.*$  from Employees  $E$  , Dependents  $D$   
where  $E.sex = 'F'$  and  $E.ssn = D.ESSN$

If you use MultiTable Select in SQL  
in any Assignment, Quiz, Final Exam, Lab  
after today you will be awarded 0 (Zero)  
marks

## JOIN

Select E.fname, E.lname, E.SSN, D.\* from  
Employee E JOIN Dependent D  
on E.SSN = D.ESSN  
where E.sex = 'F';

1. Show the details of the departments located in Houston,  
Dept JOIN DeptLocs on D.Dnumber = DL.Dnumber
2. Show the names of the depts and the names & salaries  
of male employees working in those depts.  
Dept JOIN Emp on D.Dnumber = E.Dno
3. Show the name of the employees along with name of their  
supervisors

4. Show the names of the dependents whose parents work on  
some project located in Houston or Stafford

Proj → WorksOn → Employee → Dependent

5. Show the names of the projects managed by the dept  
whose manager is James Borg.

Emp <sup>manager</sup> → Dept → Proj

6. Show the names of female employees along with the name  
of the projects where they spent more than 10 hrs.  
Emp → WorksOn → Project

7. Show the names of the departments along with the name  
of their managers.

Select D.dname, E.fname, E.lname from  
Department D JOIN Employee E  
on D.mgr\_ssn = E.SSN;

Select- E.\* from Employee E JOIN Dependent- D  
 on E.SSN = D.ESSN  
 where D.sex = 'M' and E.sex = 'M';

Select- \* from Employee where SSN IN  
 ( Select ESSN from Dependent where sex = 'M' )  
 and sex = 'M'

Show details of Employees who have a dependent of same gender as the Employee

Select- E.\* from Employee E JOIN Dependent- D  
 on E.SSN = D.ESSN  
 where E.sex = D.sex ;

```

For Each Employee E
{
  if E.sex = 'M'
  {
    For Each Dependent- D
      if E.SSN = D.ESSN
      {
        if D.Sex = E.Sex
        {
          print E
        }
      }
    }
  }
}

```

```

For Each Emp E
  if E.sex = 'f'
  for Each Dep D
    if E.SSN = D.ESSN
    if D.Sex = F
      print E

```

}

Select \* from Employee where sex = 'M' and  
SSN IN ( Select- ESSN from Dependent where sex: 'M' )

UNION

Select \* from Employee where sex = 'F' and  
SSN IN ( Select- ESSN from Dependent where sex: 'F' )

Co Related Query

Select- E.\* from Employee E  
where E.SSN IN ( Select- D.ESSN from Dependent D  
where D.Sex = E.Sex  
and D.ESSN = ESSN )

Select- E.\* from Employee E  
where E.SSN <sup>NOT</sup> EXISTS ( Select- D.\* from Dependent D  
where D.Sex = E.Sex  
and D.ESSN = ESSN )

Inner Join

Show the details of the employees and their male dependents

Select E.\*, D.\* from Employee E <sup>Inner</sup> JOIN Dependent D  
on E.SSN = D.ESSN  
where D.Sex = 'M';

Outer Join

Show the details of all <sup>male</sup> employees and ~~only~~ their ~~male~~ dependents

Select E.\*, D.\* from Employee E <sup>outer</sup> LEFT JOIN Dependent D  
on E.SSN = D.ESSN  
where E.Sex = 'M';

Left [Outer] Join → Display all rows from left table and  
only matching rows from right

Right [Outer] Join → Display all rows from right and  
only matching rows from left

Full [Outer] Join → Display all rows from left & right table  
rows are matched where possible else  
columns are NULL.

```

int count = 0;
Students[] allStudents;
for ( i=0 ; i < allStudents.size() ; i++)
{
    Student s = allStudents[i];
    if (s.isGlasses == true)
    {
print(s);      count++;
    }
}
print(count);

```

### Aggregate Functions

1. Count
2. Sum
3. Min
4. Max
5. Avg

How many female Employees

SELECT count(ssn) FROM Employee where Sex = 'F';

What is total salary paid to female employees

SELECT sum(Salary) FROM Employee where Sex = 'F';

What is total salary paid to dept managers

Select SUM(Salary) FROM Employee where SSN In  
(Select mgr\_ssn from Department);

Avg salary of dept manager

Select AVG(Salary) FROM Employee where SSN In  
(Select mgr\_ssn from Department);

Min salary for dept manager

Select MIN(Salary) FROM Employee where SSN In  
(Select mgr\_ssn from Department);

Select AVG(Salary), MIN(Salary), MAX(Salary), Count(SSN) FROM Employee where SSN In (Select mgr\_ssn from Department);

Avg salary of dno 5

Select Avg(Salary) from Employee where dno = 5;

Group by

Select Avg(salary), Count(ssn), dno from Employee where Sex = 'M'  
group by dno;

Join Grouped data with rest of table

Select Count(S.SSN), S.Super\_ssn, E.Fname, E.Lname, E.SSn  
from Employee S LEFT JOIN EMPLOYEE E ON S.Super\_SSN = E.SSN  
group by S.super\_ssn;

Multiple groupings

Select Count(SSN), AVG(Salary), dno, sex from Employee  
group by dno, sex;

Conditions & Aggregate Values

1. Condition contain Aggregate value

Find details of the employees who earn more than the highest paid female employee

Select \* from Employee  
where Salary > (Select ~~MIN~~<sup>max</sup>(Salary) from Employee where Sex = 'F');

2. Condition on aggregate function

Show dept- no where avg salary of male employee is more than ~~40k~~<sup>35k</sup>

Select avg(salary), dno from Employee where Sex = 'M' group by dno  
having avg(salary) > 35000;

→ condition on data

→ condition on aggregate functions
